Restart req Download : Estimated t Total comp	TPM Upgrade in process. The computer must restart to continue.		
	100000		
	The computer will automatically restart in 00:00:26.		
	Restart Now		

The computer will restart **2 times**.

Wait for the process to complete before opening a session.

When the computer reboots, you may see the following message: Click on F12 or ask the user to do it.

A configuration change was requested to enable, activate, and clear the TPM This action will clear and turn on the computer's TPM (Trusted Platform Module) WARNING: This request will remove any keys stored in the TPM Press F12 to enable, activate, and clear the TPM Press Esc to reject this change request and continue

If everything is OK, you will see the following message at the next reboot. The TPM will be updated.

	\frown	
	(D¢LL)	
	Updating your firmware	

How to check if Upgrade was successful:

Run **tpm.msc** as **administrator**.

And check if the version is **2.0**.
